

A WEB-BASED TOOL FOR SYSTEMATIC FIRE PROTECTION WORK

PRE✓ISION

SFP is a systematic approach to fire protection undertakings within your organisation. Briefly, it is about planning and documenting the existing fire protection measures in place, training all staff, and practising, continuously monitoring, implementing and performing follow-up checks on this work.

Everyone who owns a building or operates a business enterprise in a building is legally required to operate Systematic Fire Protection work.

This is to prevent the occurrence of fire-related accidents and to limit damage caused by a fire.

At Presto, we work on Systematic Fire Protection work in compliance with the standards and regulations developed by the Swedish Civil Contingencies Agency, an expert authority in fire protection. To learn more about Systematic Fire Protection work on the MSB website, please visit www.msb.se.

PREVISION: A FULL-FLEDGED SFP TOOL

Presto offers a perfect utility for your Systematic Fire Protection (SFP) work. With PreVision, you can quickly and easily review, update and generate status reports on your fire protection work.

To succeed with SFP on your site, it is important this work becomes an ongoing task.

Using PreVision, all information is gathered in one place, facilitating systematic work on fire protection.

PreVision issues automatic reminders when it is time for self-checks of the fire protection installations and when reviews of the fire protection organisation are required. It is up to you when and how frequently you want to perform these self-checks.

The tool contains clear instructions on how to perform these checks, and it is straightforward to record and report any deviations detected in your local fire protection.

PreVision also offers the opportunity to compile all deviations and export them to both Excel and PDF file formats. Additionally, you can print detailed reports on the fire protection system based on the guidelines from the Swedish Civil Contingencies Agency, an expert authority in fire protection.

Presto helps you to document the fire protection work you are obliged to pursue and can assist with preparing a checking and follow-up plan. We also help with auditing your fire protection installations, and we can prepare relevant drawings.

By using PreVision, all the requirements placed on the fire protection systems at companies and other organisations can be easily managed. Two different PreVision solutions are available to offer a product perfectly adapted to your business.

The system supports checking of local fire protection measures, the work environment, the property and safety.

PreVision has been designed as an open API and as such can be interconnected with other systems used in your business, all with a view to reduce the workload!

PREVISION WEB AND APP

PreVision Web is a web-based system for Systematic Fire Protection (SFP) work. By logging in to this tool, you can instantly call up an SFP view of your site. The start page offers access to your fire protection documentation, a graph depicting the self-check status and an overview of any deviations in the fire protection system that need to be addressed.

PreVision issues automatic reminders when it is time to perform self-checks on the fire protection installations. You can choose the intervals that best suits your business. You can then proceed with the self-checks in a straightforward manner. Once done, you can generate deviation reports on the fire protection as necessary. All in one and the same tool!

PreVision Web can be supplemented with the PreVision App, which is a perfect tool for individual inspectors. Using the PreVision App, an inspector can quickly and easily perform self-checks, whilst on the fly reporting any deviations found. The app can be conveniently used in areas that lack Internet access.

PREVISION AS A BINDER SOLUTION

The PreVision Fire Protection Binder has been designed for smaller organisations that want to conduct their Systematic Fire Protection (SFP) work in paper format. The fire protection binder holds all essential parts of your SFP work. The binder also contains protocols of the on-site fire protection installations for an overview of the status of the organisation's fire protection status together with clear instructions on how to perform self-checks of the system.

Moreover, the binder also has a section on SFP legislation and regulations, including a written account on fire protection in general.

WHICH PRE[✓]VISION SOLUTION SUITS YOU THE BEST?

It may be difficult to decide which PreVision solution suits your organisation the best. Feel free to ask us for help in this matter – we are experts in this field! We will be happy to show you our different tools and also to help you find out which solution is best suited for your organisation. As further guidance, below is a comparison table of the two different PreVision solutions.

	PREVISION WEB	PREVENTION BINDER
SFP compliant with applicable legislation and regulations	✓	✓
Web-based interface	✓	✗
Number of objects/areas	Unlimited / Unlimited	Unlimited / Unlimited
Number of users	Unlimited	Unlimited
Number of checkpoints	Unlimited	Unlimited
E-mail reminders	✓	✗
Report generation	✓	✗
Fire protection documentation	✓	✓
Written account of fire protection	✓	✓
Support	✓	✓
App	✓	✗
Suitable for	Both smaller and larger enterprises. Suitable for operations spread across multiple locations, buildings or floor levels. Fit for all types of businesses, including real estate owners.	Ideal for those who want to perform Systematic Fire Protection work in paper format. Suitable for smaller enterprises, tenant-owner associations and real estate owners.
